Snijbloemen, set van 3 pluggen Bloomboost

How nice would it be if you could cut flowers from your own garden for your home or to give as a gift to family or friends. Who wouldn't be happy about that?
By purchasing these plugs you will be provided with your own cut flowers from spring to late summer. It couldn't be fresher! It is also good for the wallet.
Up to 29 different varieties have been specially selected for this and are therefore extremely suitable for the vase.
Cut the flowers just above a branch with a clean sharp knife or scissors. This causes a new flower branch to quickly grow from the upper eye.
Preferably cut the flowers in the morning. The flower has then been able to absorb water all night, so the flower will last longer. Leave the cut flowers in lukewarm water for two hours in a cool room. This allows them to slowly get used to their new position.

Remove any leaves that become submerged in the vase and add a spoonful of vinegar to the water.
